# Expand your market intelligence with powerful business information

Structured web data from Dataprovider.com

Contents

Dataprovider.com brings structure to global web data

We transform the abundance of web data on the internet into an ever-growing, organized database. Dataprovider.com offers structured web data for 800 million domains, including 50 million company websites, updated monthly so that the information stays current. Our searchable index and over 230 filters mean it takes just a few clicks to find the data you need, then extract practical information, unlock key market signals, and connect with decision-makers. We're here for all data-minded professionals, from marketeers to IP specialists, governments, and investment bankers.

Why us?

800 million domains	3.1 billion web pages	50 million company websites
Unique proprietary scores	230 data fields	Tailor-made Dashboards
Web traffic indices	Website-matching feature	4 years of historical data

Read on to find out why we're the trusted data provider for B2B and data-driven operations.

Business information straight from the source

Dataprovider.com captures business information from the company's own website, right as changes happen. Specialized filter combinations in our **Search Engine** build a detailed overview: find the geographical locations, contact information, and online capabilities of companies in your target industry. Spot micro, small, and medium-sized business websites as they arise, or find leads and map emerging industries. In Q1 of 2024 alone, we discovered and captured information from 1.8 million new company websites as they went online. Our firmographic insights help you track any changes in the service and product offerings of your clients, competitors, or potential customers.

Our web data unveils an otherwise hidden world, giving you the data and tools you need to stay ahead of the curve.

Dataprovider.com helps you

- access business data, updated and straight from the source
- find profile-matched ideal customers with just one URL
- track the popularity of websites based on online traffic
- identify unique website insights with our scoring systems
- map business networks and explore new markets globally

We bring our data to you

With a sleek, easy to use **platform**, an intuitive interface with data visualizations and summary statistics, and **API** integrations to bring it all together, Dataprovider.com gives you an unparalleled data experience.

GDPR & CCPA compliance meets independently verifiable data

Our data and processes comply with the European General Data Protection Regulation (GDPR) and with the California Consumer Privacy Act (CCPA). We do not crawl websites if they disallow crawling, and adhere to the international standard of the Robots Exclusion Protocol. Our Privacy by Design technology ensures that, by default, we minimize the personally identifiable information (PII) to only what's necessary for achieving your goal.

This is all possible with our proprietary data, gathered independently and structured with our own software. We maintain total transparency regarding the nature of the data we index and the methods we employ: our monthly web crawling ensures this authenticity. By eliminating dependence on third-party information, we can consistently trace the data back to its source and verify its integrity.

✓ GDPR compliant

✓ CCPA compliant

✓ robots.txt adherent

✓ PII protected

✓ Your privacy ensured

Detailed company information, summarized with AI

With close to 50 million company websites in our database and over 230 data fields to filter by, you'll find the business information you're looking for.

We don't just make lists, however—we use state-of-the-art AI technology to create concise **summaries** of a company's products and services, based on the information provided on their website. This means you can immediately understand what the company specializes in, without having to sift through pages of information. Save time and effort by getting the most relevant information at a glance, then dive into the data that matters.

www.shiftev.com

Shift EV is a company that specializes in custom electric vehicle solution, offering services such as gas-to-electric conversions, repairs and upgrades. They provide a range of solutions for classic and custom EVs, including parts and technical support.

www.bellejo.com

Bellejo is a company that produces environmentally friendly sunscreen with innovative ingredients, aiming to protect both human skin and the planet.

Unveil firmographics and business networks

Digital ecosystems rival the importance of physical infrastructure when it comes to understanding business, so ensure you have the right tools to stay ahead. With our sophisticated **Ownership** feature, you can uncover company networks, find domains linked by common affiliation or creation patterns, and dig into the interconnected web of domains owned by the same entities. Our **AI tools** link businesses and domains by examining common details and contact information. These ownership records can be used to map out the competitive landscape of an industry, identify key players, and understand their relationships. Get valuable firmographic insights about industry size or company types, for example, and let our data contribute to your market research and strategic planning.

For businesses, **Ownership** makes usually obscured information accessible and helps you make informed decisions in B2B and B2C spheres.
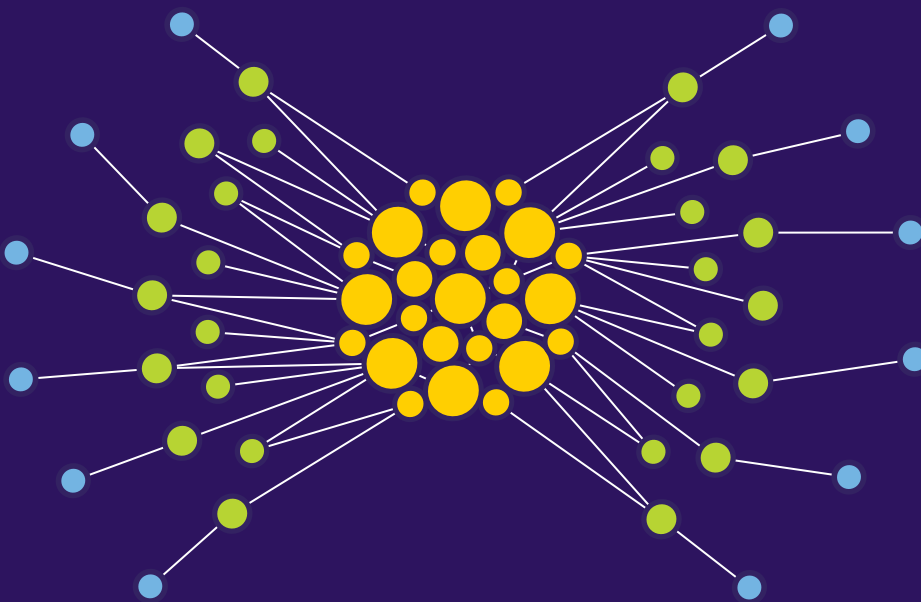

Location information at your fingertips

Dataprovider.com indexes the web, world-wide: our global coverage includes 62 (and counting) verified countries. This means we're checking for country codes in the domain name, languages used on the website, and that details like business registrations, postal codes, and phone numbers match national standards. With trustworthy and thorough country information, your teams can confidently break into local and global target markets.

Below you'll see just how strong our international coverage is. We index around 34 million companies in just the top 10 coverage countries alone. Go on to filter by region or city, and get specific results about the businesses and websites of interest.

| Rank	Country	Company websites	E-commerce websites
1	United States	16.1M	2.7M
2	Germany	3.4M	359K
3	Canada	3.2M	1.2M
4	United Kingdom	2.5M	453K
5	France	1.8M	378K
6	Netherlands	1.7M	255K
7	Italy	1.4M	233K
8	Spain	1.3M	243K
9	Brazil	1.2M	349K
10	India	1.1M	212K

A 'more like this' feature

Search By Example is one of Dataprovider.com's newest features: type in the URL of a company in your desired industry or of an ideal customer, and our proprietary algorithm gets to work. With just a few clicks, you'll have a comprehensive list of similar companies and leads globally, based on the content of a website. Generate a focused, tailored outreach map of your target industry in seconds, saving your sales and marketing teams the time and effort of tedious research. This kind of workflow improvement lets us do the heavy data-lifting, so you can focus on optimizing internal processes and pursuing new opportunities.

Better understand industry competition by using your company's URL as the Example, and generate a list of other businesses that match your profile. Further refine the results by location, business model, website traffic, or one of our proprietary scores, like **Economic Footprint** and **Heartbeat**, to know who's the most active online. Know your competition as well as your customers with tools that work for you.

Search By Example empowers teams to run efficiently and confidently, making it the perfect solution for sales teams, market researchers, and businesses looking to expand their network and client base while discovering new industries.

Behind-the-scenes access

Websites often incorporate Domain Name Systems (DNS), behind-the-scenes digital services that provide or enhance functionalities. These include additions like payment services, other business integrations, or even visual elements like fonts. Valuable information can be identified by rendering a website's HTML, CSS, or JavaScript, and by examining its DNS records for external services and resources being used. Harness this data to understand what solutions businesses need and are using.

Say you're a B2B payment service provider: your target customers might be small, e-commerce businesses that already have a shopping cart system but few or no payment options. Dataprovider.com connects you to your targets with actionable contact data and in-depth insight. Whether you'd like to help your B2C clients guide new customers away from competing offers, or understand the companies using particular live-chat solutions, our data and technology has you covered. Combine this with our **Recipes**—unique, pre-filtered datasets—to streamline your search.

Track and analyze website traffic

Our proprietary **Connection Index** provides insights into the amount of traffic a website, app, or web service receives. Whenever a user, device, or a piece of software tries to connect to a hostname, it first has to consult a DNS server, making this data uniquely suited to measuring web traffic. With this information, we ensure you're well-equipped to adapt to your market.

Monitor hostname requests and understand connection rates to client, competitor, or your own websites. Connections are indexed at domain and subdomain levels, with hourly, daily and monthly overviews, so you can easily identify trends and monitor changes. You'll see our ranking of hostnames, raw connection data, and connection distribution across countries. We transform data from a worldwide pool of DNS providers into relevant snapshots for your needs.

Daily Connection Index

- teams.microsoft.com
- slack.com
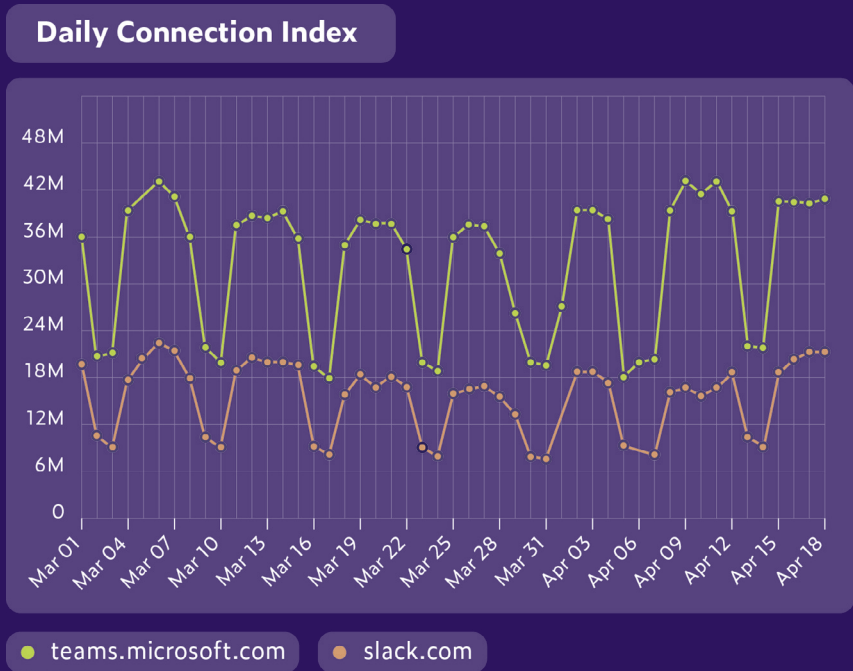

Deeper insight about your client base

Dataprovider.com's **Know Your Customer** feature lets you keep track of a chosen set of domains and track activity. Upload the hostnames you have, and we'll run a private crawl for the specific information you need—as often as necessary and tailored to your preferences. The results are exclusive to you, transparent, and protected. Then, with our API, you can connect this functionality directly to your existing systems to simplify data-sharing with your teams and clients.

KYC helps you spot unused but active domains, or websites with outdated software posing a security risk. Help your clients keep their domains safe by tracking open ports, SSL vendors, and much more. Gather business intelligence and track market signals from your own data, enriched with ours.

Using our data and **KYC** feature, you can connect the dots and keep your lead lists up to date: new numbers, updated addresses and the latest information, for all your customers, in just a few clicks.

Your dataset → **Enhanced by us**
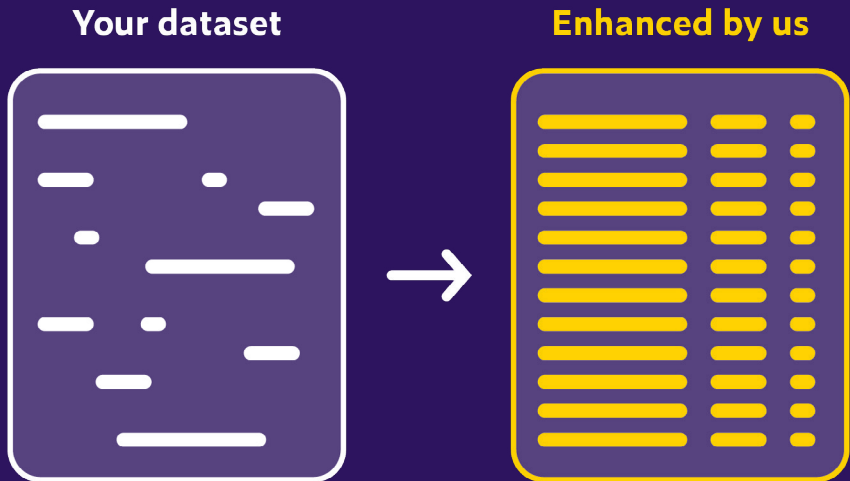

Clearer insights with interactive, shareable data

Dataprovider.com's **Dashboards** are a personalized view of your key metrics and trends. Set up custom dashboards for each of your target interests or industries to get an easy overview—include metrics on monthly growth and change over time, website content, geographical indicators, activity levels, and much more. Share a dashboard with your team or with your clients so all relevant parties can stay up to date and informed, and see beyond the numbers. Use Presentation Mode to bring your insights to a meeting and help your team understand the most current developments and take action on new business opportunities.

Our **Dashboards** offer an accessible, interactive way to visualize the most relevant data, tailored to your specific industry needs.
